

Brain Game

Across

- 2. system plays a role in regulating sexual behavior
- 4. short and long-term memory
- 8. cushions and protects the brain
- 9. this cortex is involved in pain processing
- 12. most closely associated with breathing

Down

- 1. lobe supports perception and recognition
- 3. regulates motor behavior and supports balance
- 5. this lobe when injured can cause paralysis or mood changes
- 6. processing emotions and fear-learning.
- 7. aphasia results in inability to understand spoken

- 14.** lobe associated with perception and integration of somatosensory information
- 16.** regulates a wide range of behavioral and physiological activities
- 19.** maintaining homeostasis by controlling autonomic functions
- 20.** damaged cortex impaired limits motor response to visual cues
- 21.** lobe is associated with primary visual area of the brain

language

- 10.** cortex supports object memory and recognition
- 11.** cortex is associated with phantom limb pain
- 13.** aphasia results in inability to express language
- 15.** relaying motor and sensory information
- 17.** cortex is involved in reasoning, judgment, and personality
- 18.** damage to this cortex is associated with amnesia (forgetting)
